

U.S. President Donald Trump may have spurned solar power, but that has done little to slow the solar revolution that is sweeping nearly every other corner of the world, from Pakistan to...

Still, a dominant 62% of China's total annual power generation came from thermal power, reaching 6,171TWh, a 1.7% y-o-y decrease. 59% of this 62% share came from coal.

This year, China's Three Gorges Renewables Group intends to erect an 8-gigawatt solar farm valued at \$11 billion. Find out more about building this renewable energy source that will provide ...

The report shows that China's massive investments in solar, wind, storage, and electrification are cutting fossil fuel use at home while sending clean tech around the globe.

China unveiled an action plan last month to speed up building a "new electricity system." According to the document, Chinese authorities will use advanced power generation, regulation and ...

By the end of June this year, China's installed renewable energy capacity reached 2.16 billion kilowatts, accounting for 59.2 percent of its total capacity - the largest in the world in both ...

Building a new power system dominated by renewable energy such as wind and solar power is a core technical pathway for promoting global clean energy transition and achieving the climate goals...

To meet China's goal of carbon neutrality by 2060, substantial investment in upgrading power systems needs to be made to optimize the deployment of new photovoltaic and wind power ...

China is adding more solar and wind power to its energy grid than any other economy - but that huge buildout has its challenges. Here's what we can learn

China has reportedly developed the world's first dual-tower solar thermal plant near Guazhou County in Gansu Province to enhance efficiency and reduce carbon dioxide emissions.
