Bosnia and herzegovina load shifting

Bosnia and Herzegovina has not yet transposed the Electricity Integration Package (EIP), deadline due on 31 December 2023, and an infringement procedure for non-transposition has been initiated by the ...

"Considering that in today"s circumstances, the disruption has cascaded to Croatia, with which Bosnia and Herzegovina has the largest number of interconnecting transmission lines, it was ...

As the world navigates a rapidly shifting geopolitical landscape, Bosnia and Herzegovina (BiH) stands at a crossroads. The stakes are high - it is important for BiH to act decisively to ensure its energy ...

In terms of the demand for power, total system peak load in BiH is expected to increase, though quite slowly. In 2030 it is expected to be 2000 MW, which is just 100 MW higher than in 2025, and about ...

In South-Eastern Europe, Bosnia and Herzegovina is the clearest example of how fragmentation itself becomes a structural system constraint. At the centre of this complexity is Bosnia ...

Governments in the region are actively trying to decentralize production in the energy sector by encouraging the construction of power plants using renewable energy resources.

A majority of the new solar developments are concentrated in the Herzegovina-Neretva Canton, an area where the existing transmission infrastructure is not equipped to handle the ...

What do you want to talk about? Let"s talk about energy, economics, and sovereignty -- because Bosnia and Herzegovina"s electricity sector is standing at a crossroads.

Abstract: In this study, the impact of climatic parameters in the region of Bosnia and Herzegovina on the design, construction, and operation of overhead electrical lines is analyzed.

Operational Area Mostar. Territorial Unit (TU) Mostar covers the area from Neum to the northwest of Bosnia and Herzegovina. TU Mostar is responsible for approximately 1330 km of transmission lines ...
