

Transformational change in distributed sustainable energy development in Nepal through increased private investment leveraged by public funding resulting in low-carbon economic growth and ...

The Programme started in February 2019 and will end in March 2025. It is implemented by the Alternative Energy Promotion Centre (AEPC) and a consortium led by DAI Global UK and including ...

Distributed generation is shaping up to be an important component of Nepal's decentralised energy system. This increases energy security to users and reduces transmission losses.

Struggling with power cuts and high costs? Discover how the Distributed Energy System (DES) can drive Nepal's energy independence.

We specialize in large-scale energy storage systems, mobile power stations, distributed generation, microgrids, containerized energy storage, photovoltaic projects, photovoltaic products, solar industry ...

It works to increase private sector investment to develop and utilize distributed sustainable energy (DSE), primarily in commercial, institutional, and industrial sectors.

The integration of distributed renewable energy and storage solution located at customer premises will enhance the quality and reliability of Nepal's power supply, while reducing costs for ...

Integrating distributed energy technologies within Nepal's broader energy mix could transform the country economically and socially. It could address Nepal's low electricity demand, ...

I enjoyed sharing my knowledge and experience in this domain, as well as discussing the current challenges and opportunities for the development of distributed energy systems in Nepal and...

Distributed solar installation across 500 rooftops in Kathmandu Valley with smart monitoring and storage systems. Discover how our innovative energy solutions can transform your region and create ...
