

With 68% renewable electricity generation in 2024, Chile has reaffirmed its leadership in the energy transition within Latin America. As new technologies are developed and transmission networks are ...

Given Chile's decarbonization goals and projected growth in electricity demand, designing effective policies to support the expansion of renewable energy remains a central challenge in the years ahead.

The project was fully capable of supplying power on 1 January 2021, improving the electricity service in Chile by providing reliable, renewable and cheap energy.

The main legal framework for the electricity sector in Chile is the "General Law of Electric Services (DFL-4)", a rather liberal framework which enables private investment in generation, transmission and ...

Through a 15-year Power Purchase Agreement (PPA) with AES Andes, the data centres will utilise energy generated from solar and wind sources. Equinix has significantly expanded its ...

Following is an overview of the current installed capacity, energy projects in construction and the amount of energy each source is expected to produce. Data was obtained from energy ...

The project consists of the installation of landfill gas extraction wells, collection system infrastructure, blower/flare, gas compression and cleanup, and a power generation facility.

Interactive graphic with the evolution of the monthly electricity generation per year of the national, interconnected central and interconnected systems of the large north.

Chile is rapidly moving to build more power generation capacity, with much of that effort focused on renewable energy resources and battery energy storage systems (BESS).
