

The ENERGIZE project, funded by the EU under the LIFE Programme, offers an in-depth review of energy cooperation models within (urban eco-) industrial parks in Europe and beyond.

The EU is expected to reach gigawatt-scale hydrogen storage capacity by 2030, driven by green hydrogen projects in Germany, the Netherlands, and Spain, where it can be used both as a fuel and ...

To achieve this objective, it is imperative to bridge the massive gap in energy storage capacity, deploying it rapidly and at a large scale to meet the projected demand of 200 GW by 2030.

There are 147 energy storage projects under construction in Europe, with a total capacity of 14 GW, according to the European Energy Storage Inventory, launched by the European ...

The Kvested project combines an existing utility-scale solar park with large-scale battery storage to create a fully integrated hybrid asset. The battery system has been operational since ...

Europe's ambition to become a global hub for energy storage system (ESS) manufacturing is facing a sobering reality check.

Key Insight: The newly launched Lisbon Battery Energy Storage Industrial Park positions Portugal as a leader in sustainable energy solutions, offering scalable storage systems to stabilize renewable ...

The European Energy Storage Inventory, developed by the Joint Research Centre (JRC) of the European Commission, is a new interactive platform that maps and analyzes over 1771 energy ...

The goal is to list all planned and operational energy storage projects in Europe by location and technology. The dashboard can be filtered by country, project status and technology.

Guangzhou Huangpu district recently initiated the new energy storage industrial park project, a key initiative within Guangdong province's strategy for emerging industries. ...
