

Are data center rack enclosures a commodity product?

At one time, data center rack enclosures and related equipment were considered commodity products—simply a platform to stack equipment, with more enclosures purchased as servers and rackmount equipment were added to the IT inventory.

What is a data center rack?

Data center racks are metal frames used for organizing IT equipment such as servers and switches. Cabinets are enclosed racks that offer added security and environmental control. Cages are secure areas within a data center that house multiple racks or cabinets, providing an extra layer of security.

Where are servers and networking equipment located in a data center?

Inside a data center, servers and networking equipment are securely housed in racks, cabinets, and cages. Because racks and cabinets are often the first pieces of equipment that organizations install, it is crucial to make informed choices to ensure optimal performance.

Are enclosed racks a good choice for a data center?

This makes them well-suited for transportation or for use in unstable environments. Enclosed racks are ideal for high-density data centers and server rooms, as they are designed to accommodate heavier and hotter equipment, as well as higher wattages per rack.

At MetalFab Group, we specialize in fabricating high-quality data center racks and fabricated metal enclosure solutions tailored to meet the unique demands of customers ranging from large-scale tech ...

No cost program for data center and IT professionals who purchase multiple server racks + cabinets each year. Free design consultations, dedicated customer service representative, pre-installed ...
