

The current contribution of renewable energy (solar energy) in energy mix of Myanmar is 3 percent (190.28 MW) that is mainly utility-scale power plants. No wind power plant is implemented till today.

Smart Power Myanmar was established in May 2018 by The Rockefeller Foundation through its implementing partner, Pact Myanmar, with the express goal of working to facilitate and support the ...

The optimization of microgrids is crucial in these areas and will help to boost rural access to electricity. It ensures infrastructure such as hospitals, schools and farms are able to use electricity ...

This study conducts a comparative techno-economic analysis of two electrification approaches in Myanmar: centralized grid extension and decentralized microgrid deployment.

Techno Hill aims to provide affordable clean energy to improve lives in rural Myanmar. Despite the challenges faced by the country and its population, Techno Hill has shown incredible resilience in ...

In this study, we focused on distributed microgrids amongst electrification options. In Myanmar, as in other developing countries of the Association of Southeast Asian Nations (ASEAN), diesel ...

While Myanmar has many areas of urban development, building a centralized grid that can reach all of its rural communities would take decades by the Myanmar government's own estimates.

The core problem this project addresses is the inefficient operation of renewable energy micro-grids in rural Myanmar, leading to unreliable electricity supply and hindered rural development.

This guidebook is intended to serve government officials, renewable energy developers, and potential investors in the development of mini-grid projects in Myanmar.
