

# Foreigners look at China's solar power stations

China's solar ambitions are emblematic of its broader race toward a green energy future, driven in part by Beijing's interest in becoming less reliant on imported oil and natural gas.

The massive growth in wind and solar begs the question: why is China still building coal power plants and, by most analyses, way more than it actually needs? The answer is complicated.

Nearly 70 percent of China's foreign power investments from 2022 to 2023 were in renewables like solar and wind, surpassing fossil fuels for the first time since Beijing started backing ...

An aerial view shows residential buildings with roof-mounted photovoltaic-solar panels in Yinchuan, in China's Ningxia Hui Autonomous Region, on March 31, 2024.

China is adding more solar and wind power to its energy grid than any other economy - but that huge buildout has its challenges. Here's what we can learn

Solar power is the most spectacular of China's clean-energy game changers; its fruits can be seen all around the world and at every scale, from balconies in Baden Baden to seas of glass in...

In China, more wind turbines and solar panels were installed last year than in the rest of the world combined. And China's clean energy boom is going global. Chinese companies are...

Almost three-quarters of all solar and wind power projects being built globally are in China, says a new report that highlights the country's rapid expansion of renewable energy sources.

China's solar power capacity is on course to surpass coal this year A sunset glow lights up wind turbines and rows of solar panels at a wind farm in Qingyang, Gansu province, China.

In our research on Chinese enterprises engaging in overseas energy investments, we regularly meet investors who are keen on wind and solar projects but daunted by the structural ...
