

Google's massive new solar and battery project is a game-changer. Learn how grid-scale batteries are the key to 24/7 carbon-free energy and what this blueprint means for our future.

It is the largest operational BESS project in Arizona, according to the utility. The Sonoran Solar Energy Center includes a 260MW solar PV plant. The BESS' power output in megawatts is the same ...

Located south of Buckeye, the 260MW solar facility has the ability to charge a one gigawatt-hour (GWh) battery energy storage system and is reportedly Arizona's largest operational battery energy storage ...

Google has initiated a long-term collaboration with Energy Dome, a company developing an LDES solution known as the CO2 Battery. This technology is designed to store surplus renewable energy and ...

Google and SRP launch a first-of-its-kind partnership to advance non-lithium long-duration energy storage and support grid reliability

Google will provide funding for a portion of long-duration energy storage projects developed for the Salt River Project's electric grid, as part of a research partnership announced Monday...

Both organizations also commissioned Storey Energy Center, an 88-MW solar and battery storage facility. Google will receive clean energy output from Sonoran Solar Energy Center, Storey Energy Center as well as ...

Google is joining forces with one of the Valley's major utilities to explore ways to accelerate development of long-duration energy storage, or LDES, technologies.

SRP and IPP NextEra Energy Resources have together deployed two solar-and-storage projects, one with a 250MW/1,000MWh BESS that came online last year, which will feed Google's data centres in ...

Salt River Project and Google have established a first-of-its-kind research collaboration to better understand the real-world performance of emerging non-lithium ion long duration energy storage (LDES) ...
