Gravity (chemical) battery
A gravity battery is a type of energy storage device that stores gravitational energy--the potential energy given to an object when it is raised against the force of gravity. In a common application, when renewable energy sources such as wind and solar provide more energy than is immediately required, the excess energy is used to move a mass upward against the force of gravity to generate gravitational potential energy. When customers eventually require more energy tha...

Energy Vault's patented gravity storage system achieves a levelized cost of storage (LCOS) between \$0.05 and \$0.08 per kWh, validated through operational pilots in Switzerland and Texas.

This analysis highlights gravity batteries as a leading solution for long-duration, sustainable energy storage in renewable grids. Gravity batteries are pivotal for achieving 24/7 energy ...
