

What is a home automation system?

A home automation system is the motor for your smart home. It's the software your hub runs to connect all of your devices so you can interact with them, set automations, scenes, routines, schedules, and control them all.

How do I get Started with home automation?

To get started, define your home automation goals. Ask yourself what you want to achieve. Some common goals include: Enhanced Security: Smart cameras, locks, and alarms. Energy Efficiency: Automated lighting and climate control. Convenience: Voice-activated controls for devices. Entertainment: Whole-home audio and smart TVs.

How do I choose a home automation system?

The home automation system you choose could determine what your smart home looks like and how it runs, down to the brand of lightbulbs you'll be able to buy. With relevant differences in user interface and capabilities, it's important to choose the right one for your needs.
