How to store lithium ion batteries safely?

1. Storing Lithium Ion Batteries at The Right Temperature. The typical lithium ion battery storage temperature range of a home or storage unit is usually storing lithium batteries safely. The range of safe storage temperatures is wide, as shown in the chart below. However, issues like decreased battery lifespan occur in extreme weather conditions.

How do you store a lithium battery in winter?

In winter, cold temperatures can challenge lithium battery performance, making proper storage critical. To protect your batteries, store them in a location where the ambient temperature stays stable, ideally between 50°F and 68°F. Avoid unheated garages or outdoor spaces where freezing conditions may occur.

Can you store a lithium battery in an outdoor shed?

If you live in a very cold or very hot location, avoid lithium ion battery storage in an outdoor shed without taking the proper precautions like using extra insulation, a heating pad, or a cooling unit. These types of fluctuations in temperature cause the battery to expand and contract, which causes reduced battery capacity and potential damage. 2.

How should a lithium battery be charged before storage?

Before placing a lithium battery into storage, it's critical to charge it to the correct level. Unlike lead-acid batteries, lithium batteries should not be stored fully charged or completely empty. Maintain the battery at 60% to 80% state of charge before storage. This charge range minimizes stress on the battery cells and slows chemical aging.
