

lighting,solar-thermal high-temperature power generation,and solar architecture. As of 2011,Himin Solar produces 2 million m²solar thermal heaters every year. In total by 2011,it has produced 10 million m².

While experimenting with metal electrodes and an acidic solution, nineteen-year-old French physicist Alexandre Edmond Becquerel creates the first solar cell. This solar cell was known as a photovoltaic ...

The team suggests that replacing the ITO--one of the most fragile and expensive materials in photovoltaics--with single-walled carbon nanotubes (SWCNTs) could take perovskite ...

By employing advanced technology and focusing on user-friendly designs, the solar tube has proven itself to be a versatile solution for energy generation and conservation in both residential ...

In 1883, New York inventor Charles Fritts created the first practical working solar cell by coating selenium wafers with an extremely thin layer of gold--a device that could generate consistent ...

Learn how to build a DIY solar generator inspired by NASA tech. Save energy, reduce your carbon footprint, and harness the power of the sun.

Let's use the idea of our motionless mirrors to invent a new solar power plant which will collect solar energy from an area of 100 sq.km to produce as much electricity as a nuclear...

Researchers have now found a way to generate clean power from rain drops. The new device, reported in the journal ACS Central Science, generates electricity by harnessing the energy ...

Charles Fritts created the first working solar cell in 1883. He coated the semiconductor material selenium with an extremely thin layer of gold, which resulted in cells with a converted ...
