

SUNROVER has secured Iranian ministerial support for grid-stabilizing solar-plus-storage projects following leadership meetings and technical presentations in Sabat.

TEHRAN - The central Iranian province of Markazi has significantly expanded its solar power infrastructure, with 500 small-scale solar power plants connected to the national grid, a senior ...

Iran is in talks with several leading Chinese companies to develop solar power plants and battery energy storage systems (BESS) as part of its strategy to increase renewable energy capacity, a senior ...

This post explores the current state of Iran's new energy market, recent policies, key case studies in solar PV and energy storage, and the promising yet challenging road ahead.

A 250 MW solar farm in Sistan and Baluchestan, paired with a 100 MWh battery system. Since 2023, it's reduced grid outages by 40% in a region where temperatures hit 50°C (122°F).

Iran is seeking to fast-track solar energy projects in an effort to ease biting electricity shortages because of crumbling infrastructure and years of US sanctions.

While renewable energy cannot fully bridge this gap, it can effectively alleviate the load on the national grid, particularly during peak electricity consumption periods, helping maintain energy ...

While oil and gas still dominate headlines, the country has recently accelerated investments in wind, solar, and energy storage projects to diversify its energy mix and meet growing electricity demands.

In a significant step toward a more resilient and decentralized energy future, Iran's Renewable Energy and Energy Efficiency Organization (SATBA) has announced major progress on its plan to build ...

Due to solar PV and wind capacity distributed across large areas and multiple locations, expanding the grid would allow renewable energy projects to connect and deliver power in the needed quantities.
