

This study examines the evolving landscape of microgrid development in the United States, with a specific focus on the social and community dimensions often overlooked in such projects.

Think Microgrid has released its 2024 State Scorecard, revealing that while some states are making incremental advances in microgrid policy and deployment, the overall landscape remains ...

A new report by Think Microgrid says most states are doing an insufficient job at deploying microgrids despite developing microgrid roadmaps.

Microgrids can and should be an important part of our energy landscape, but most states aren't doing much to support microgrid development.

Innovative state action last year across the microgrid policy landscape was not enough to change the U.S. microgrid landscape, said Think Microgrid in its new State Scorecard 2024.

Project delays and cancellations-prompted by transmission, interconnection, permitting and supply-chain challenges-mean that microgrids aren't being built as quickly as the market requires, industry ...

However, effective MG operation encounters several challenges: stability issues, power quality concerns, inadequate energy management, cybersecurity threats, regulatory complexities, ...

Smart MicroGrids (SMGs) can be seen as a promising option when it comes to addressing the urgent need for sustainable transition in electric systems from the current fossil fuel-based ...

Looking ahead, the future of microgrid development holds significant promise, driven by advancements in artificial intelligence, machine learning, and smart grid technologies.

Despite the potential benefits of microgrids, their development is constrained by various regulatory and policy barriers that vary across nations.
