

Is energy independence a 'mirage'?

The authors state that their work shows that energy independence is a "mirage" since France has neither the uranium needed to fuel its nuclear reactors nor the extensive minerals required to build renewable generation available on French soil.

Does France support nuclear power?

France goes all in on atomic energy Since Macron's U-turn, France has embarked on an aggressive push to advocate nuclear power in EU energy policies, teaming up with like-minded member states to promote nuclear power as a low-carbon energy source and the bloc's best chance of achieving energy security.

Does France have a low-carbon energy mix?

France has a very low-carbon electricity mix owing to its large nuclear fleet, the second-largest after the United States. As an early leader in setting out an ambitious energy transition, France legislated a net zero emissions target for 2050 in its 2019 Energy and Climate Act and aims at reducing by 55% its greenhouse gas emissions by 2030.

Why should France prioritize nuclear energy?

The prioritization of nuclear energy has not just been a choice, but a strategic move that has allowed France to gain one of the highest levels of energy independence in Europe while maintaining extremely low levels of per-capita carbon output.

Eau de Paris leverages its expertise and facilities to generate renewable energy. It thus contributes to the objectives of the city of Paris and its regions and promotes its energy independence.

France has a low-carbon electricity mix owing to its nuclear fleet, yet many reactors are reaching the end of their lifetime. The country has started an ambitious energy ...

Crucially, she added, it would also bolster the country's energy independence as European countries scramble to wean themselves off Russian gas and oil amid the war in Ukraine.

This report carried out an energy analysis of energy supply in France. In the past two decades, the drive for energy independence, coupled with long term, centralised planning, has ...
