

It is convenient for students to conduct various tests related to solar energy. The product consists of a training model and a test box, modular design, and an simulation light source. Experiments can also ...

Ask students to combine solar panels, controllers, inverters, and batteries to form a solar photovoltaic power generation system. And provide a variety of application load experiments: inductive, resistive, ...

Specifically satisfy solar cell performance test and photovoltaic application teaching requirements of new energy professional at the higher education and vocational education.

Portable Solar Power Generation Training Box The DLXNY-ST03 portable solar power generation training box is made up of a case that contains a photovoltaic power supply device, solar power ...

The test box uses an integrated design to reduce the size and weight of the device and facilitate movement. The distance between the training module solar panel and the simulation light source is ...

This renewable energy training system new energy training equipment solar energy products device adopts 15W monocrystalline silicon solar cell panel (35cm*30cm) and 220V, 80W solar simulation ...

This educational training equipment designed to meet the renewable energy-related professional photovoltaic solar cell performance testing and teaching applications related training needs in higher ...

It is convenient for students to conduct various tests related to ...

Ask students to combine solar panels, controllers, inverters, and batteries to form ...
