The location of electricity generating projects over 300 MW must be reviewed and approved by The New Mexico Public Regulation Commission. The commission may not approve a proposed project of 300 MW or more tha...AuthorityLocalSee more on ncsl Bureau of Land ManagementCommunications Sites | Bureau of Land ManagementThe BLM administers more than 1,500 communications sites on Federal public lands in the eleven Western states and Alaska.

This Wind Energy Guidebook (Guide) focuses on land-based wind only, and is intended to help local decision-makers and other community members prepare for and understand wind energy development.

Understand the complexities of siting and permitting wind energy projects, including federal and state regulations, environmental reviews, and strategies to address community concerns and opposition.

Explore the nuances of wind energy land use regulations and their impact on project development.

About this Document This document is intended to provide guidance to local governments considering developing an ordinance or rules related to the development of utility-scale ...

Some states are looking to develop statewide standards or guidelines to address the patchwork of siting regulations and practices, which can vary dramatically between localities. There ...

This data sheet presents property loss prevention guidelines and recommendations for land-based (onshore) wind turbines, typically part of a wind farm or wind park, used to generate electrical power.

The standards specified in ordinances provide clarity to wind developers and the public. Ordinances may also address issues of community impact such as: land use, noise standards, and safety.

Wind ordinances on the city, county, and state levels may be difficult to understand, whether you are an expert
