

As the U.S. aims for 100% clean electricity by 2035, projects like Swan Lake are crucial for overcoming renewable energy's "sunset problem." The facility acts as a grid shock absorber, smoothing out ...

The Swan Lake project will be able to store renewable energy for up to 9.5 hours and then release that energy to power about 125,000 homes in the Pacific Northwest.

Developers announced last week the project design is finished. ...

Developers announced last week the project design is finished. The Swan Lake energy storage project will use two artificial lakes at different elevations, pumping water uphill when there's...

The project will pump water from the lower reservoir to the upper reservoir at times when power prices are relatively low. When power prices are high and energy is needed, water will be released from the ...

The Swan Lake Energy Storage Project is a critical part of the transition to a 100% clean electrical grid. Swan Lake will drastically increase storage capacity for renewables like wind and solar--creating a ...

Learn about going solar in Swan Lake! Find installers and cost estimates and see how much you could save on your electricity bill.

It will be able to store renewable energy for up to 9.5 hours and then release that energy to power about 125,000 homes in the Pacific Northwest.

Once complete, Rye Development said the facility will provide 400 megawatts of renewable energy, saving the equivalent of 595,063 tons of carbon dioxide emissions per year. The ...

Solar and wind power generation vary greatly by time of year and time of day. At certain times of the day and year, wind and solar projects produce more energy than the grid can handle. ...
