

Several leaf shaped aero leaves are placed in the form of tree, called Wind Tree. Wind Tree uses tiny blades housed in the aero leaves to generate power from wind energy.

Wind turbines are taking on a whole host of new designs. There are high flying kites, nautilus shaped spirals, and now "rustling" leaves. These new designs have freed wind power from being grounded ...

The tree-shaped turbines are equipped with rotating leaves that capture wind energy, complemented by solar panels at the base, ensuring a continuous and efficient energy production ...

In this design wind energy is used to induce electricity with the help of aero leaves. Several splint shaped aero leaves are placed in the form of tree called Wind Tree. Wind Tree uses bitsy blades ...

Stylized illustration showcasing wind energy, featuring a wind turbine with leaves, emphasizing eco-friendly power. Wind turbines stand prominently on lush, colorful hills during autumn in a serene ...

The Wind Tree is an unusual construction: a wind turbine in form of a tree with leaf modules that turn in the wind and supply energy. The concept stems from a French company; the frame is provided by ...

Invented by Jérôme Michaud-Larivière, who founded the French company New Wind to bring it to market, these trees rely on a series of 72 vertical-axis micro-turbines (known as Aeroleafs) to ...

Its Aeroleaf blades are mini vertical turbines that operate silently and blend aesthetically into urban environments. Despite its high cost, the Wind Tree is a viable option for cities seeking to reduce their ...

On October 11th, New World Wind welcomed its first Aeroleaf Hybrid in Birmingham, UK. Its tree-shaped wind turbine stands tall on a hill, and its leaves keep rotating to capture the air and...

Looking at the rustle of the leaves to the wind, French entrepreneur Jérôme Michaud-Larivière has come up with a cost-effective ingenious idea that can harness the wind around us into consumable clean ...
