

# The proportion of solar panels in the industry

Department of Energy

We expect the combined share of generation from solar power and wind power to rise from about 18% in 2025 to about 21% in 2027. In our STEO forecast, utility-scale solar is the fastest ...

While residential solar power currently generates just a fraction of the country's overall electricity, it has continued to grow rapidly in recent years, despite COVID-19-related supply chain ...

Therefore, the percentage of solar consumed in each state may vary from its percentage of net generation. Some of the increase in some states (e.g., Massachusetts) is due to a reduction in ...

The Interstate Renewable Energy Council (IREC) has reported that 280,000 Americans work in solar, as of 2024. Over 10,000 solar companies across U.S. states are responsible for this employment, with ...

Approximately two-thirds of solar jobs are in installation and development, mainly involving residential-scale projects.

Falling costs are fueling PV power's growth. With solar panels becoming more affordable, more markets can embrace solar energy to meet their green goals, dramatically boosting adoption rates. States ...

In early 2025, SolarReviews concluded our third annual survey of companies in the U.S. solar industry. We heard from hundreds of companies that comprise various industry sectors, from residential solar ...

4.4% of our global energy comes from solar power. China generates more solar energy than any other country, with a current capacity of 308.5 GW. The US relies on solar for 3.9% of its ...

Find up-to-date statistics and facts on the global solar photovoltaic industry.
