

# Victoria home energy storage emergency shutdown

Rollout of Victoria's emergency backstop mechanism for solar has been anything but smooth, with significant issues still needing resolution.

With a configuration separate from the preexisting PV inverter, the FranklinWH System avoids the need for any modifications of original setups and the need for any emergency backstop ...

For these rooftop solar systems, this means the power you generate and feed into the grid can be remotely turned down or switched off in an emergency, as a last resort.

Victoria's Emergency Backstop Mechanism, introduced in stages starting October 2023, mandates that new, upgraded, and replacement rooftop solar systems be capable of remote modulation or ...

We can now activate technology (known as an emergency backstop) to remotely reduce or stop exports from solar systems if there is excess energy in the network. This requires new solar customers to ...

Learn how the Victoria solar emergency backstop works, what it means for homeowners, and how it affects solar and battery installations.

Energy Safe Victoria has shut down the 20 megawatt (MW) Raywood solar farm in Victoria following a fire that broke out late last week in one of the on-site inverters.

The FranklinWH System effectively avoids these pitfalls, ensuring homeowners maintain uninterrupted energy storage and utilization. It offers unparalleled reliability and operational simplicity ...

Learn what the Victorian Emergency Backstop for Solar (VEBM) is and how it affects the energy usage of Victorian residents with solar power systems.

In this blog, we'll explain what happens to a home battery system when the grid goes down, how long it can last during blackouts, and what to look for in a reliable backup setup.
