

Looking for a simple way to harness hydropower from a small stream? The Jack Rabbit turbine offers a fascinating solution for micro-hydropower generation, requiring just 13 inches of water ...

Learn how to generate electricity from flowing water with microhydropower systems. Find out about different turbine types, components, and planning tips for your ...

It is designed to produce usable household power from springs and creeks that are too small to sustain the same level of useful power from a conventional A.C. generating system. Because D.C. power ...

Check each product page for other buying options. Price and other details may vary based on product size and color. Need help?

If you have water flowing through your property, you might consider building a small hydropower system to generate electricity. Microhydropower systems usually generate up to 100 kilowatts of electricity.

This guide showcases practical water turbine generators designed for small flows, rivers, or streams. Each option converts flowing water into usable electrical energy, suitable for charging batteries, ...

From our humble beginnings over a decade ago PowerSpout turbines have developed into world leading products. We make each one specifically tailored to your site and energy needs. Sustainably ...

For our customers with residential or small community projects, Canyon Hydro provides a broad selection of micro-hydro systems up to about 100kW, each delivering high efficiency, quality and ...

For off-grid villages nestled near flowing streams or mountain creeks, a 1kW micro hydro turbine generator offers an elegant, continuous energy solution that doesn't rely on sun exposure or ...

Here are our picks for the best hydroelectric generators. We looked through about a dozen models to find the top hydroelectric generators. Admittedly, there aren't a ton of options in the...

Harris Hydro offers a pelton turbine that can produce usable household power from small creeks and springs. The system is adjustable, durable and efficient, and can operate on 2 to 250 gallons/minute ...

Micro-hydro systems work best for off-grid homes with year-round flowing water and enough elevation change to create pressure. If you live off-grid and have access to a stream, creek, ...
